

ALUMINUM COUPLINGS

Seal Fast Aluminum Cam Locks are produced using **high quality Gravity Casting**. Having used Die Casting in the past, we found it to be weaker when comparing equal thickness, resulting in a much higher failure rate. Even though **Gravity Casting** is more expensive process than Die Casting, we feel it is the **better solution for the industry**.

HANDLES

- Seal Fast Aluminum Cam Locks are provided with **Heavy Duty Brass Handles**.
- **Brass Handles** prolong the life of the adapter when compared to Stainless Handles, as they are softer on the adapter.

Seal Fast Aluminum C & E are provided with **Machined Shanks**.

- This allows for easier coupling insertion into hose as the shank is more true, and the surface is smoother.
- It helps prevent leakage when compared to non-machined shanks

SHANKS

CAM & GROOVE

Offering higher quality, at a price competitive with standard imported couplings.
